

Icon Modern started with a simple idea: taking trees that would otherwise end up in landfill and transforming them into custom tables. Furniture with a story and a mission.

And as we have grown, so too has our materiality in creating unique, beautiful tables that last a lifetime. From urban hardwood and stone to veneer and concrete, our versatile capabilities can help match your specification to create a truly one-of-a-kind table that people are drawn to in a space; where they want to pull up a chair and make things happen.

Here is a snapshot of past work that we hope inspires ideas for your next project.

## A WORD ABOUT URBAN HARDWOOD

Urban hardwood is salvaged wood that comes from city and suburban trees that were taken down due to disease and other causes. Many view this wood as waste, or at best, mulch or firewood. But we view urban hardwood as a regenerative resource and sustainable material. This is how Icon Modern got started!

Urban hardwood is heavy in character; each tree has a unique story to tell. We source all of our urban wood from Illinois and Wisconsin while offering a variety of species and finishes.
